

Kelly Schuster-Paredes is an educator, speaker, and AI integration specialist at Pine Crest School in Florida, where she leads initiatives in artificial intelligence, computer science, data literacy, and emerging technologies. With more than 25 years in education across the United States, England, and Peru, she works with faculty, leadership teams, students, and operational departments to help schools navigate the rapidly changing landscape of AI with clarity, practicality, and responsibility.

Kelly is known for translating complex technical concepts into approachable, real-world learning experiences. Her work focuses on AI literacy, ethical technology integration, workflow redesign, cybersecurity awareness, and preparing students and educators for a future where AI systems increasingly shape communication, business, and decision-making. She also co-hosts the internationally recognized podcast [Teaching Python](#), where she interviews educators, developers, and industry leaders about computing, AI, and the future of learning.

Through conference presentations, professional development workshops, and curriculum design, Kelly helps organizations move beyond AI hype to focus on thoughtful implementation, critical thinking, and human-centered innovation.
